**Location:** Aurora, CO | **Email:** sujeetshiremath@example.com | **LinkedIn:** /in/sujeethiremath | **GitHub:** /sujeethiremath

## Professional Summary

Highly accomplished Full-Stack Software Engineer with 5+ years of progressive experience specializing in architecting, modernizing, and scaling mission-critical, high-volume systems. Proven ability to drive significant business impact by optimizing data pipelines (processing 200M+ records), leading major infrastructure migrations (TFS to Azure DevOps, Docker/Kubernetes), and delivering user-facing applications with a focus on compliance (ADA, 2FA) and performance. Seeking a challenging Software Engineer role at Google to leverage expertise in distributed systems, observability, and data-driven development.

## Professional Experience

### E-470 Public Highway Authority (December 2022 – Present)

#### Senior Software Architect / Lead Engineer

- **High-Throughput System Optimization:** Re-architected console applications utilizing multi-threading and parallel processing to handle 200+ million outbound TVL records, resulting in a 90%+ reduction in file processing time (from hours to minutes) and maximizing system throughput.
- **Distributed Database Scalability:** Led the phased, zero-downtime upgrade of database columns from INT to BIGINT across 10+ distributed components (API endpoints, Service Fabric microservices, batch jobs, SPs), successfully future-proofing the core tolling system for petabytes of data and mandatory EZPASS integration.
- **Proactive Observability & High Availability:** Designed and deployed a mission-critical monitoring system to detect and auto-notify on latency in interdependent IOP file processing (STRAN, SCORR, SRECON), mitigating potential SLA violations and ensuring 99.99% data integrity across financial systems.
- **DevOps & Modernization:** Directed the repository migration from TFS to Azure DevOps, automating migration with PowerShell and converting legacy build tasks to efficient YAML pipelines, streamlining CI/CD workflows.
- **Front-End & Compliance:** Led the modernization of the ExpressToll customer platform (Angular 18) to achieve full ADA compliance (axe/PDF generation), significantly improving accessibility and service for thousands of customers.

### Vettx Inc. (February 2022 – October 2022)

#### Software Engineer / Data Platform Lead

- **Production ML Deployment:** Designed, trained, and productionized a machine learning classifier to accurately distinguish individual sellers from dealership listings, automating the core inventory acquisition logic and cutting manual data qualification efforts by over 50%.
- **Scalable Data Ingestion (Serverless):** Engineered and deployed resilient, serverless scraping pipelines (Node.js/Python on AWS Lambda/S3) to collect and store vehicle listings from high-volume sources, guaranteeing fresh and accurate leads for 200+ dealerships nationwide.
- **API & Partner Integration:** Developed internal NestJS APIs to facilitate complex, two-way data flow with major partners (Carfax, CDK Global, Twilio), enabling real-time data enrichment and SMS communication within the CRM.
- **Infrastructure Ownership:** Built the company's entire DevOps infrastructure from scratch using GitHub Actions and YAML CI/CD, successfully replacing manual deployments and reducing critical deployment time from hours to minutes.

### InvestorKeep (February 2021 – December 2021)

#### Software Engineer / Cloud Automation

- **High-Density Container Orchestration:** Designed and deployed a containerized microservice architecture, managing 200+ Docker containers on Kubernetes (AWS), which efficiently scaled the platform for high concurrent user loads and improved system reliability by 30%.

- **Security Modernization:** Engineered and implemented GoLang-based services to replace vulnerable legacy authentication and integrate 2FA with Auth0, demonstrably strengthening platform security and meeting financial compliance standards.
- **Testing & Quality Assurance:** Wrote over 100 Cypress E2E test cases to automate regression testing across the financial portfolio management website, increasing code quality and reducing post-deployment bugs by 45%.
- **Observability & Analytics:** Established a complete observability stack using Prometheus and Kibana alongside Mixpanel dashboards to visualize user behavior, delivering real-time insights to stakeholders that drove product feature prioritization.

## FIGmd Inc. (October 2017 – October 2018)

### Data Engineer / ETL Developer

- **Big Data Pipeline Design:** Designed and built an internal, scalable ETL tool using Python and Apache Spark for processing and standardizing complex, large-scale healthcare data.
- **Data Integrity & Compliance:** Managed full ETL (extract, transform, load) and data mapping for national U.S. healthcare registries (e.g., American Urological Association), improving the accuracy and timeliness of submissions to meet strict federal reporting deadlines.

## Technical Skills

| Category       | Skills                                                                                             |
|----------------|----------------------------------------------------------------------------------------------------|
| Languages      | C#, TypeScript, Python, Go, JavaScript, SQL, PHP                                                   |
| Cloud & DevOps | Azure DevOps (YAML), GitHub Actions, Kubernetes, Docker, AWS (Lambda, S3), Prometheus, Kibana, TFS |
| Databases      | SQL Server, MySQL, PostgreSQL, Stored Procedures, Indexing, Partitioning                           |
| Frameworks     | Angular (18), Next.js, NestJS, Laravel, Next.js, Apache Spark                                      |
| Architecture   | Microservices, API Design (REST), Multi-threading, System Optimization, Data Modeling              |

## Education

### Master of Science in Computer Science (August 2019 – December 2021)

California State University, Chico, California, US.

### Bachelor of Engineering in Computer Engineering (August 2012 – May 2016)

St. Francis Institute of Technology, Mumbai, India.

## Projects

- Achieved accurate predictions of future COVID-19 peaks using advanced machine learning techniques such as GridSearchCV, TimeSeriesSplit, MLPRegressor, and MLPClassifier. Empowered decision-makers with valuable insights to proactively allocate resources and plan for the pandemic.
- Crafted captivating web applications using HTML, CSS, JavaScript, Python, Django, and Google Cloud. Created a classic chess game, an organizer, and an online food pantry system, pushing the boundaries of interactive web development.
- Crafted remarkable programs in algorithms and data structures. Emulated a contact list database, implemented Dijkstra's Algorithm for shortest path finding, simulated grocery stores using event-driven programming.
